

Dispenstech Solutions was the first company to introduce industrial and customized vending to the South African market after years of extensive research. We invested a lot of time and resources to adapt the concept for the South African market and to ensure that each client's specific requirements can be met. The access system currently in use on site is linked to the vending machines. Therefore no extra cards are issued as the employees will use their existing clock cards or fingerprints.

The heart of **Dispenstech Solutions'** value proposition is our ability to stock products and/or consumables you currently use and then supply them in ways that save you time and money. Consumables/products include everything you currently use in your working environment that you could save money on (i.e. PPE, cleaning material, sanitary ware and any other consumables)

This system is revolutionising the industry, helping thousands of businesses drive productivity and cost savings and we are of the opinion that it can also help you. We are confident that you won't find a more complete, cost effective solution on the market.

We supply the vending machine(s), software and technical maintenance only. You do not have to change your current PPE and/or consumables supplier.

Our professional approach to the vending market, range of equipment, as well as our specialized technical back-up and support ensures us being the only company that can supply a complete turnkey solution to your industrial and/or customized vending needs.

We have a wealth of experience that we are willing to pass on to you, our clients, thereby ensuring you the pleasure of "Hassle Free Vending"

Dispenstech Solutions are fortunate to have clients all over South Africa making use of its vending machines. Herewith a few of our satisfied clients:

*With our dedicated team of professionals we can honestly say
we are the experts when it comes to providing industrial and customized vending solutions
and we constantly strive to be the company that offers the best service in the industry today*

INDUSTRIAL VENDING

The **Dispenstech Smart Store** is the solution for all your PPE requirements.

The Smart Store can provide PPE to your employees as well as clients when they enter your premises, by placing the Smart Store at strategic points.

From the Smart Store your employees will be issued the items for free by using their **existing access/clock cards or biometrics**. You will be able to draw reports on who's taken what. Our system also allows you to limit them from being issued with certain products (if required) as well as the quantity of each product.

A credit card system can also be installed as an optional extra. Clients who forget to bring their own PPE (masks, etc) will then be able to buy from the same machine with their bank card.

- Vending gives you the best of both worlds: immediate access along with complete accountability
- Plug in and start saving at least 30%
- Increase productivity by making products available 24/7 at the point of use - employees can self-serve and get back to the job in a matter of seconds
- Although the product is easily accessible, every transaction is controlled and tracked
- Complete control over the issuing of items – frequency and quantity per item
- The **Smart Store** ensures that your employees and clients have the right products at their fingertips
- Dispenstech Solutions** supply the machines, card readers and software to operate and manage the **Smart Store**. Fingerprint reader(s) to be supplied by the client (same reader as already being used on site).
- Locker(s) can be added to the machine(s) if the client has bigger items that cannot be dispensed from the vending machine(s).
- Flexible Reporting – the level of control in reporting is completely up to you
- It is hard to imagine a more efficient supply process

SOFTWARE SPECIFICATIONS

FEATURES

- The access system currently in use on site is linked to the vending machines. Therefore no extra cards are issued as the employees will use their existing clock cards or fingerprints.
- The client is able to configure settings and add employees to the database via the network from his desktop.
- The client has the ability to program or assign employees via the network to either one specific vending machine or all vending machines.
- The client can create certain groups and assign products and employees to these groups. These employees will then be limited to vend specific products used by this group only.
- The client can limit the number of products per employee. These limitations will then automatically pertain to all vending machines. In other words, if the employee received a product from one machine, he will not be able to go to another machine and vend the same product if he is limited.
- The client can also allow the employee(s) to exceed his limits for certain important PPE products. The client can then access a report that will provide details on who exceeded their limits.

ARCHITECTURE

- Software is server-based and available 24/7
- Software is compatible with 32-bit and 64-bit Microsoft Windows operating systems.
- Software is accessible from anywhere on the network.
- Software has an open database structure (Microsoft SQL Server)

SOFTWARE ACCESS AND SECURITY

- Software must be administered by the client.
- The client can appoint multiple software users and administrators.
- Software licenses are for the software package and will be limited to 1 client connection (additional connections can be purchased).
- The standard package allows for 1000 card holders (additional can be purchased).
- The client's user(s) have administrator access to the server's operating system.

- The client's nominated user(s) have administrator access to the database software.

REPORTING

- The system is able to generate reports and is accessible from any licensed client connected computer.
- Software users are able to print and export reports (RTF or Excel).
- The system can record all vending machine transactions and generate detailed reports on all transactions (who, when, which group and quantities of specific products).
- Reports on credit balances (employees exceeding their limits) are available.

TO BE SUPPLIED BY CLIENT (before installation can be scheduled):

- A computer or server must be supplied by the client, minimum specifications will be provided.
- If **CARD READERS** are already being used on site then the client must supply:
 - 1x Network point for each machine
 - 1x Electricity point for each machine
- If **FINGERPRINT READERS** are already being used on site, the client must supply:
 - 1x Fingerprint reader for each machine
 - 2x Network points for each machine
 - 1x Electricity point for each machine

MACHINE SPECIFICATIONS

- ❑ The **Dispenstech Smart Store** is dust proof and water resistant.
- ❑ By making use of a key, the client is able to re-fill stock levels without making use of an external support company.
- ❑ Hardware interfaces link to server software and update database with all transactions.

DIMENSIONS (MACHINE ONLY - EXCLUDING LOCKER)

- ❑ H 1840mm
- ❑ W 1065mm
- ❑ D 830mm
- ❑ Weight: 380 Kg

TO BE SUPPLIED BY CLIENT (before installation is scheduled) – refer page 6:

Card reader(s): *1x Network point and 1x Electricity point per machine*

Fingerprint reader(s): *Fingerprint reader(s), 2x Network points and 1x Electricity point per machine*

LOCKER SPECIFICATIONS

Each **SMART STORE** can accommodate 2 lockers.

The client has the choice between a 36 and/or 19 locker unit (or both).

Independent unlocking control system, reliable door opening and closing state acquisition system, increasing delivery reliability.

Locker Dimensions per Unit:

Unit	Width	Depth	Height
36 Lockers	880mm	400mm	1830mm
19 Lockers	1020mm	400mm	1830mm

Power Consumption: 580W
Power Supply: AC 200V 50Hz

Single locker dimensions:

Unit	Width	Height	Qty
36 Lockers	185mm	115mm	36 boxes
19 Lockers	289mm	172mm	3 boxes
	208mm	275mm	16 boxes
